TITLE	Idaho Kids Count, 1995: Profiles of Child Well-Being.
INSTITUTION	Idaho KIDS COUNT Project, Boise.; Mountain States Group, Boise, ID.
SPONS AGENCY	Annie E. Casey Foundation, Baltimore, MD.
PUB DATE	[Mar 96]
NOTE	291p.
AVAILABLE FROM	Idaho KIDS COUNT Information Clearinghouse, Mountain States Group, 1607 West Jefferson Street, Boise, ID 82702.
PUB TYPE	Reference Materials - Directories/Catalogs (132) -- Statistical Data (110)
EDRS PRICE	MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	Child Development; *Child Health; *Children; Demography; Disadvantaged Youth; Social Indicators; Social Status; State Programs; Statistical Analysis; Tables (Data); *Well Being
IDENTIFIERS	*Idaho

ABSTRACT

This data book represents a count of children and their well-being in society. It is intended to serve as a reference document, merging into a common format vital records (births and deaths), census information, and administrative data from many sources. The book is also intended to serve as an organized, cohesive and accurate view of how children are faring in the state of Idaho. The sections of the data book are: (1) "Overview"; (2) "Kids Count Indicators," an explanation of the data compiled and why it is important; (3) "Idaho Children and Their Families," a demographic portrait; (4) "Idaho's Children at a Glance," a listing of the major findings of the data book; (5) "Idaho Compared to the Nation"; (6) "Idaho Trends," a display illustrating areas of improvement and still in need of improvement; (7) "State Profile," information about Idaho's children by specific indicators; (8) "Population of Youth by County"; and (9) "County Profiles," a comparison to state averages. Four appendices include child abuse referrals, by county; high school graduation rates; and standardized test scores. (WJC)

Special thanks to Tammy Hogg, Center for Vital Statistics, Idaho Department of Health and Welfare, for assistance in developing population estimates used in the KIDS COUNT data; and to Mike Thuleen, Idaho Department of Commerce, for the maps depicting Idaho KIDS COUNT data.

The Idaho KIDS COUNT Project wishes to thank the Annie E. Casey Foundation for its vision on youth issues and financial support of this project.

WHAT IS "KIDS COUNT"?

The Annie E. Casey Foundation is the nation's largest foundation dedicated exclusively to disadvantaged children. Established by Jim Casey (one of the founders of United Parcel Service) and named in honor of his mother, its goal is to foster public policies and human-service reforms that more effectively meet the needs of today's vulnerable children and families.

In 1989, the Annie E. Casey Foundation and the Center for the Study of Social Policy launched KIDS COUNT — a national and state-by-state effort to track the status of children in the United States. When they selected the phrase KIDS COUNT, they did so for two reasons.

This databook represents a count of children and their well-being in society. And children are critical to society's well-being; they matter, or count in our lives.

In 1994, the Idaho Office for Children and Boise State University received a four year grant from the Casey Foundation to begin an Idaho KIDS COUNT project. The project is now administered by the Idaho Dept. of Juvenile Corrections and Boise State University. The Idaho Dept. of Health and Welfare provides additional funding for the KIDS COUNT Clearinghouse. Mountain States Group, a private, non-profit community resource organization, coordinates the Idaho project.

This data book is intended to serve at least two purposes. First, it is a reference document, merging into a common format vital records (births and deaths), census information, and administrative data from many sources. Secondly, this book should create an organized, cohesive and accurate view of how children are faring in the State of Idaho.

HOW TO USE THIS BOOK

The Idaho KIDS COUNT Data Book presents information on fifteen indicators of child and family well-being. The indicators measure different risks faced by Idaho's infants, children, teens and families, and are grouped into five categories: Economic Well-Being, Health, Academic Achievement, Emotional Well-Being/Physical Safety, and Adolescent Behavior. The indicators reflect a broad range of conditions influencing the well-being of children. They reflect conditions that span the range of developmental stages from birth through adolescence. And they are outcome measures which can be updated periodically allowing for legitimate comparisons and trend analysis. The book is divided into ten sections:

OVERVIEW
A summary of children's status in our state

KIDS COUNT INDICATORS
An explanation of the data compiled and why it is important

IDAHO CHILDREN AND THEIR FAMILIES
A demographic portrait of our people

IDAHO'S CHILDREN AT A GLANCE
A listing of some of the major findings of the data book

IDAHO COMPARED TO THE NATION
A visual presentation of how Idaho is faring when compared to the national averages

IDAHO TRENDS
A visual display illustrating where we are improving and where we are not

STATE PROFILE
Statewide information about Idaho's children by specific indicators

POPULATION OF YOUTH BY COUNTY
The percent of children and youth in each county

COUNTY PROFILES
Information on children in each of Idaho's 44 counties as compared to the state averages

APPENDICES
Additional information concerning the presented data

See inside back cover for information about the Idaho KIDS COUNT Information Clearinghouse.

TABLE OF CONTENTS

"Let us all rededicate ourselves to providing guidance and love and attention to our young folks. They deserve it, and Idaho will suffer unless we provide it. The cost of the disillusionment of our children is incalculable. We must open our hearts, our minds, and our pocketbooks to making children feel wanted today — and to help them become tomorrow's productive and thoughtful citizens."

– Governor Phil Batt –
State of the State Address, January 8, 1996

OVERVIEW

In an ideal world, kids should count no matter where they live, no matter who their parents are, no matter whether they are rich, poor, black, brown, no matter their religious preference and no matter their physical or mental abilities. We owe it to our children to provide the safest and most secure, equitable environment possible; one in which they are free to grow to the greatest of their potential.

Unfortunately, we live in a real world where we must work long and hard towards making sure Idaho's kids count. Of the 50 states, Idaho ranks 13th in size and 42nd in population. Almost one third of our population is under the age of 18. Compared to neighboring states, Idaho's infant mortality rate is one of the higher rates in the region. Nationally, child death rates have been declining; Idaho's trend fluctuates somewhat from year to year, but does not appear to be declining like the national rate. Idaho has the second highest high school drop out rate when compared to neighboring states, exceeded only by Nevada. And the percentage of births to unmarried teen mothers has been steadily increasing.

But all the news is not bad — Idaho can be proud of many of the findings in this databook. In Idaho, the percentage of women who receive adequate prenatal care has been increasing and the low birth weight rate has been on the decline since 1991. The percent of children in poverty in our state has declined since 1985 and is lower than the national average. Idaho's rate of single parent families is lower than the national average and second lowest among the neighboring states. Idaho's unmarried teen birth rate and juvenile crime arrest rate fall far below the national average.

In a climate of dwindling resources and competing problems, it is essential that those precious resources be focused where they will do the most good. It would be tragic to squander our limited funds according to political maneuvering or emotion-based rhetoric. Only fact based, data driven information can provide an accurate picture of what our children need and how best to help them.

This data book is a tool for policy makers, legislators, parents, professionals and citizens. The data has been identified, gathered and compiled. Now, what is done with this information will determine whether or not Idaho will choose to improve the health and well-being of its youngest citizens. Children have no political clout — adults must speak out on their behalf. Let's show our kids that they ***do*** *count.*

Material and Economic Well-Being

Childhood poverty is closely linked to a number of undesirable outcomes in areas such as health, education, emotional well-being and adolescent behavior.

Poverty can hurt children in many ways — through poor nutrition, substandard housing or homelessness, family stress and fewer resources for learning outside of school.

Children in single-parent families often do not hav the same economic resources available as those growing up in two-parent families.

Health

Good health for children begins with good prenatal care for their mothers. Babies weighing 5.5 pounds or less have a higher death rate and are more likely to develop disabilities. This group of children is more likely to have problems as they move through the growth stages. Research shows that women who do not receive early prenatal care are more likely to give birth to a low birth weight baby.

High rates of infant mortality may be indicative of poor access to health care, lack of prenatal care, birth defects and high rates of poverty.

The child death rate reflects risks to children, including health problems, exposure to hazardous conditions, preventable injuries, child abuse and neglect.

Emotional Well-Being and Physical Safety

Child abuse is a multifaceted problem. It includes a variety of phenomena: physical abuse, sexual abuse, and neglect. The types are not mutually exclusive, nor are they found in any certain population group. Incidents of child abuse cut across all groups.

Abused and neglected children have an increased chance of becoming runaways and juvenile delinquents. There is a higher incidence of teen pregnancy, alcohol and drug abuse, and school problems in abused and neglected youth . Children who are abused and neglected are more likely to abuse or neglect their own children.

Adolescent Behavior

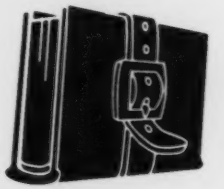
The current generation of adolescents must negotiate their way to adulthood amidst pervasive drug abuse, teenage pregnancy, sexually transmitted disease, suicide, and violent victimization, as well as unintentional injuries.

Teenage pregnancy continues to have serious health, social and economic consequences for teens, their babies, and society in general. Children born to adolescents are more likely to be of low birth weight, to have health problems and suffer child abuse and neglect. Adolescent parents have fewer educational and career opportunities, thus perpetuating poverty for themselves and their children.

Being arrested for a violent crime is clearly a negative outcome for a young person. Children in detention centers lack the opportunity for participation in family life, traditional educational systems and interactions with the community.

The transition from adolescence to adulthood is a critical period in people's lives. Older teens who are not productively engaged during this period often find it difficult to regain ground later in life. The percent of teens not attending school and not working reflects a group of young people who are not engaged in either of the core activities that usually occupy people during this crucial period.

Academic Achievement



In light of the many risks that children and adolescents face, it has been shown that one of the strongest "protective factors" is academic success. Today, teens who drop out of high school face enormous obstacles for achieving financial success in life. The world has changed, job opportunities have diminished, military options have narrowed and young people can no longer easily build a life without education. Some research suggests that many children who will eventually be high school dropouts can be identified as early as third grade.

Graduating from high school is associated with long term positive outcomes for young adults. Graduates are more likely to be regularly employed than non-graduates.

IDAHO CHILDREN AND THEIR FAMILIES

IDAHO PROFILE
Idaho Children and Their Families

STATE POPULATION 1,065,885
(1992 Estimate, U.S. Bureau of the Census)

Population by race & ethnicity*	Total	Percent
American Indian	15,160	1.4
Asian/Pacific Islander	10,604	1.0
Black	4,321	0.4
White	1,035,800	97.2
Hispanic*	59,002	5.5
Population under 18	322,787	30.3

Under 18 population by race & ethnicity*	Total	Percent
American Indian	5,574	1.7

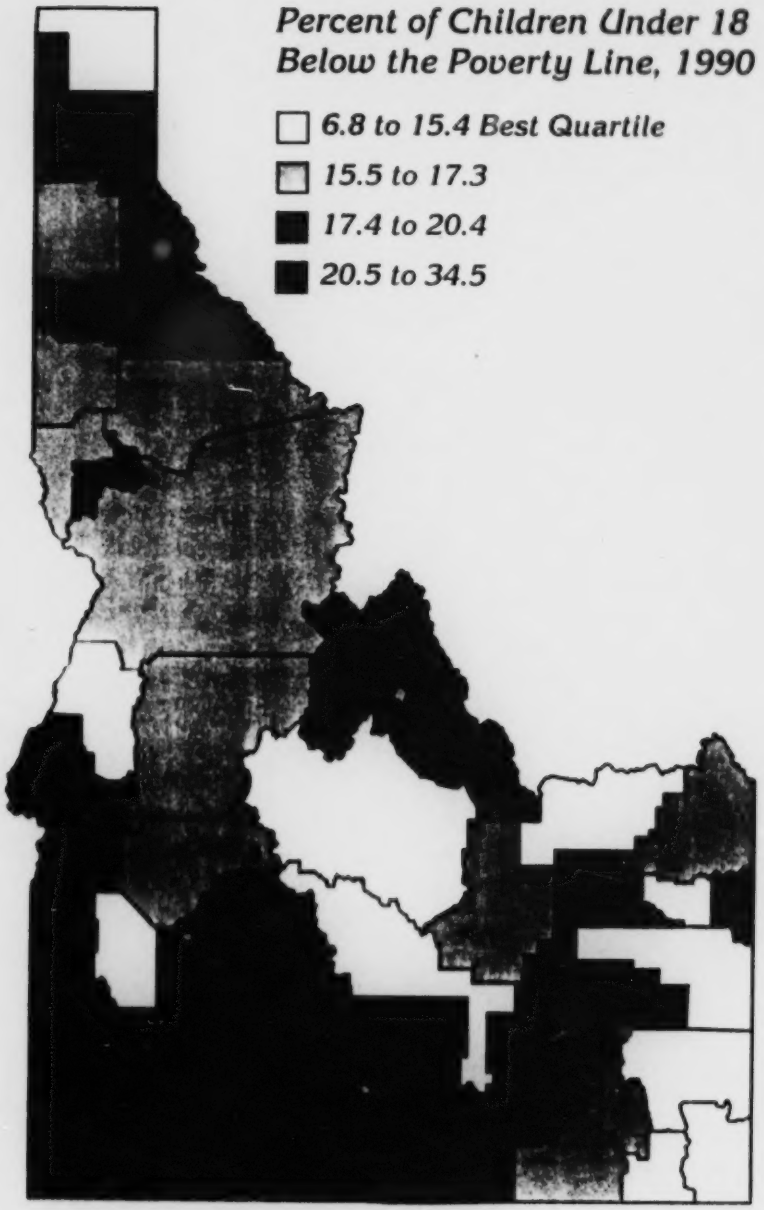
THE VISION

All children deserve a secure future and to grow up in an economically stable family.

BEST COPY AVAILABLE

28

29



39

In Idaho, 49,159 children live in poverty; that represents 16.2% of all children under 18 years of age.

CHILDREN IN POVERTY

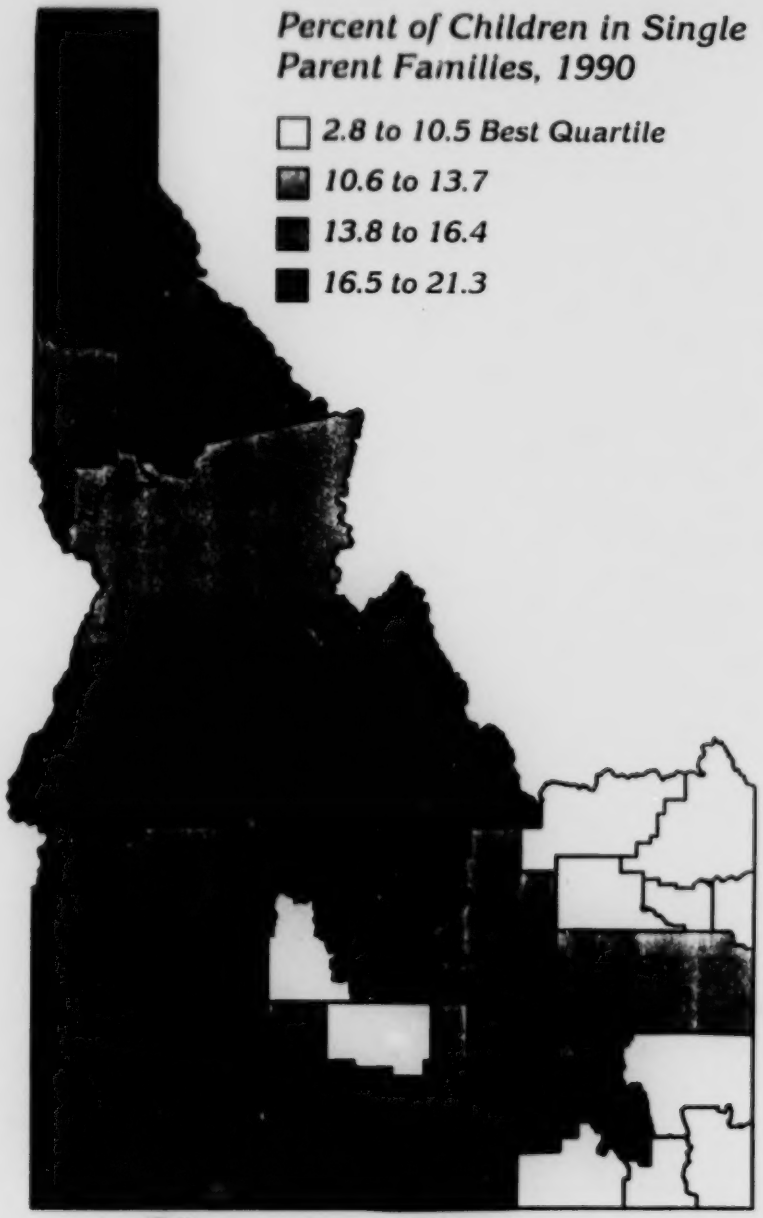
Idaho's percent of children in poverty has declined since 1985 and is now 15% lower than the national rate. However, compared to our neighboring states, Idaho's percent of children in poverty is second highest, exceeded only by Montana. (1995 KIDS COUNT DATA BOOK: State Profiles in Child Well-Being, Annie E. Casey Foundation)

"Children in Poverty" is a measure of the percent of children under the age of 18 living below the U.S. Poverty Threshold. The poverty threshold is defined as three times the amount of money it takes to feed a family for one year. The most recent census data are from 1990 and are based on personal income and the poverty threshold. In 1990, the national poverty threshold for a family of four was $12,674.

Children in poverty are at risk for poor nutrition, substandard housing or homelessness, increased family stress and fewer resources for learning outside of school. The effects of poverty will have a life long impact on many children.

31

CHILDREN IN SINGLE-PARENT FAMILIES



32

14.7% of Idaho children (42,840) live in single-parent families.

CHILDREN IN SINGLE-PARENT FAMILIES

Idaho's percent of single-parent families is 30% lower than the national rate and the second lowest among our neighboring states. (1995 KIDS COUNT DATA BOOK: State Profiles in Child Well-Being, Annie E. Casey Foundation) The national rate has been steadily increasing. Likewise, Idaho's 1992 rate was 9% higher than in 1985.

"Children in Single-Parent Families" is the percentage of related children under age 18 years who live in families headed by one person — male or female — without a spouse present in the home. "Related children" includes the family head's children by birth as well as other persons under age 18 who are related to the family head.

Children growing up in single parent households typically do not have the same economic or human resources available as those growing up in two-parent families. Many single parents receive inadequate child-support payments, placing the child at further risk to suffer the ill effects of poverty.

33

IDAHO kids count

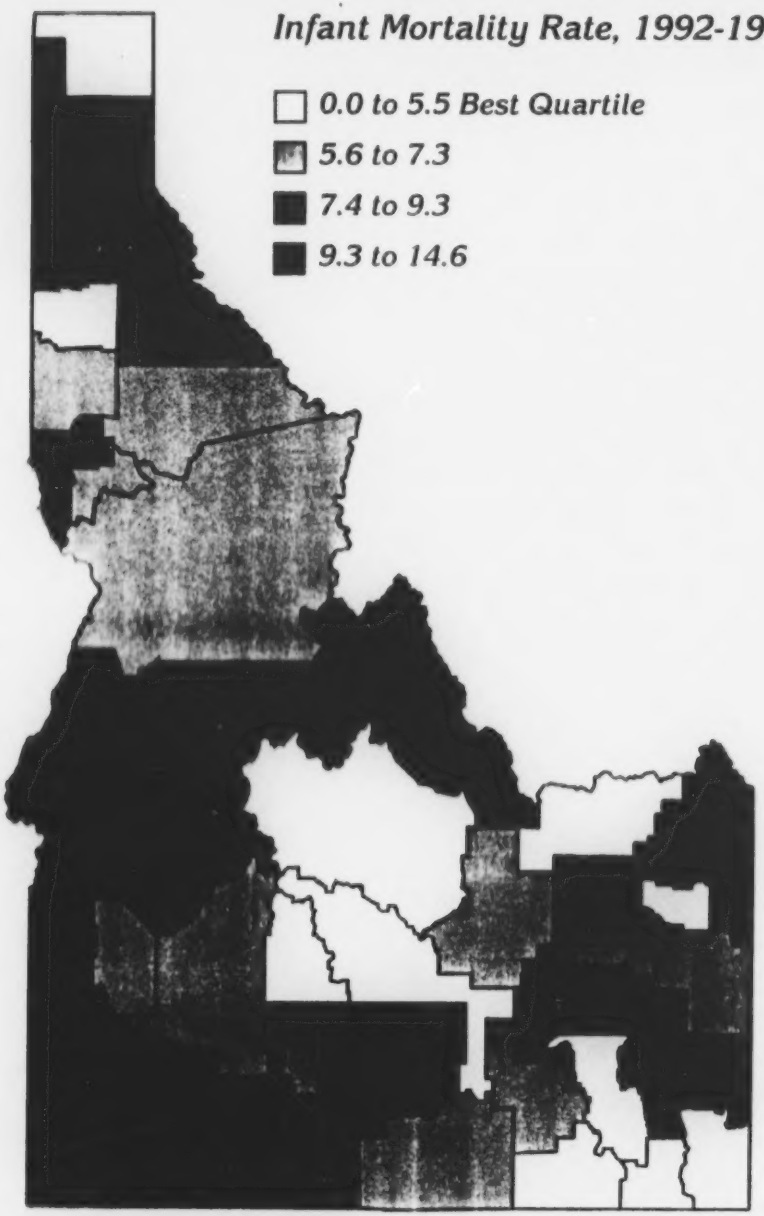
"Are the investments in our children expensive? Compared to what?"

William Woodside, Corporate CEO

BEST COPY AVAILABLE

THE VISION

All children deserve to be born healthy, be free from preventable diseases and injury, and receive quality health care.



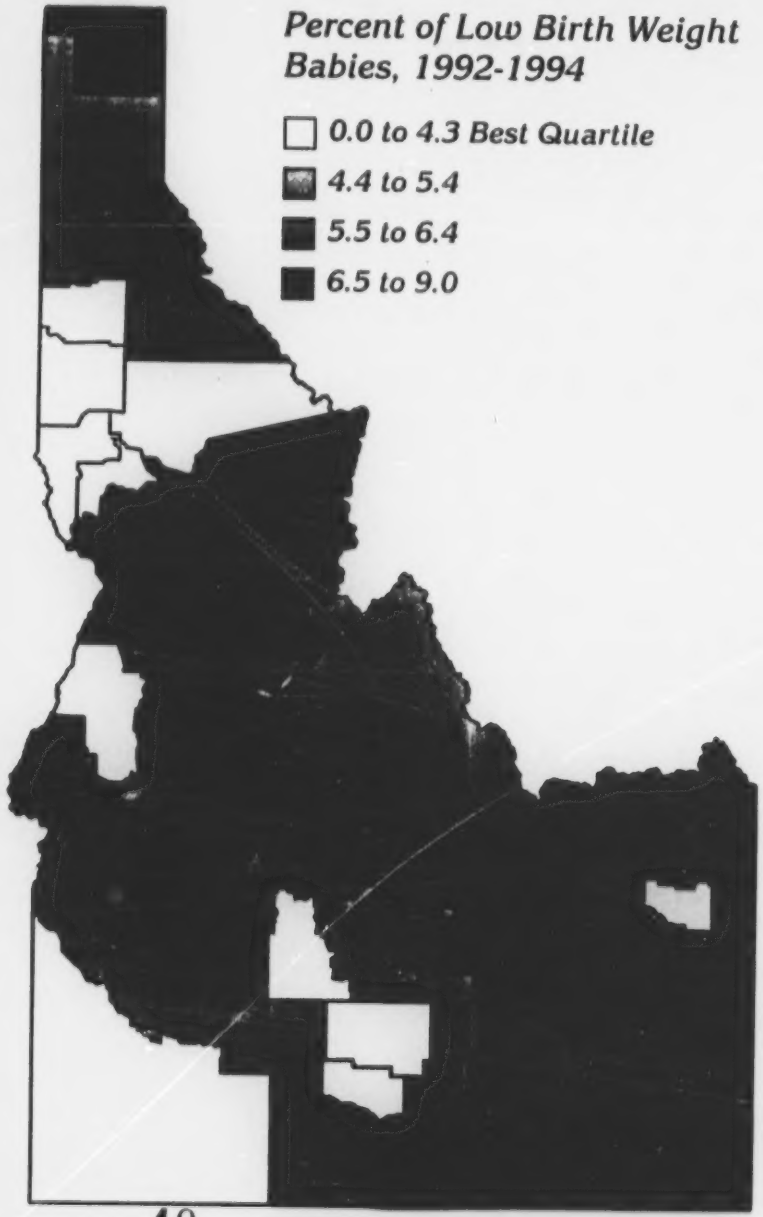
In 1994, 119 babies died before their first birthday, a rate of 6.8 deaths per 1,000 live births.

INFANT MORTALITY

Nationally, the infant mortality rate has fallen from a rate of 10.6 in 1985 to a low of 8.5 in 1992. Idaho has shown a similar trend. The three year infant mortality rate has steadily fallen from 10.6 in the mid-1980s to the current (1992-1994) rate of 7.6.

The "Infant Mortality Rate" is the number of deaths occurring to infants under one year of age, per 1,000 live births. Data are reported by residence not by place of death.

Infant mortality is considered to be a barometer of our society. High rates are associated with poor access to health care, lack of prenatal care, birth defects (including those caused by prenatal exposure to alcohol and drugs) and poverty.



40

There were 958 low birth weight babies born to Idaho residents in 1994 (5.5% of all births).

LOW BIRTH WEIGHT BABIES

The 1994 low birth weight rate is essentially unchanged from 1985. Idaho remains consistently below the national rate.

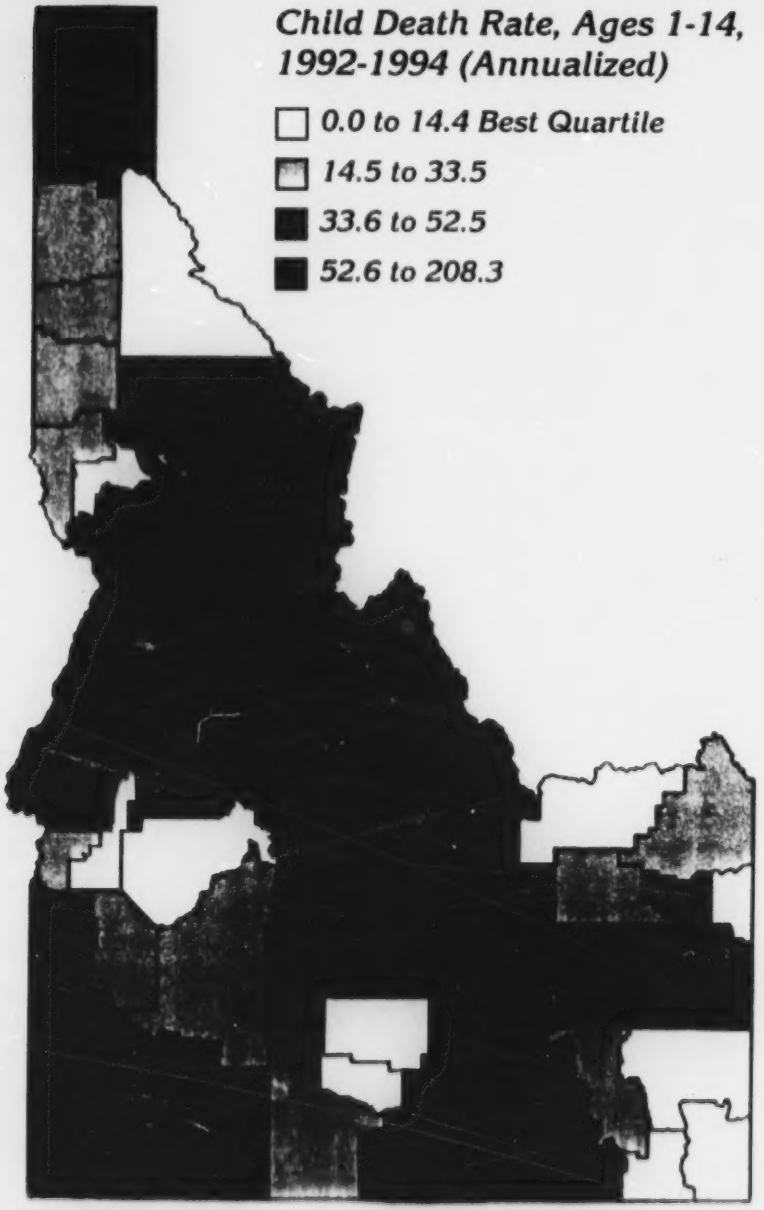
"Low Birth Weight Babies" includes live births weighing under 2,500 grams (5.5 pounds and under). The data are reported by place of mother's residence, not by place of birth.

Low birth weight babies are at higher risk of developing problems as they grow. These children have a higher likelihood of developmental disabilities, health problems and school related problems.

"He who has health has hope; and he who has hope, has everything."

Arabian proverb

41



42

In 1994, 83 Idaho children between the ages of 1-14 died.

CHILD DEATH RATE

The three year (1992-1994) annualized child death rate in Idaho is 33.6 deaths per 100,000 children.

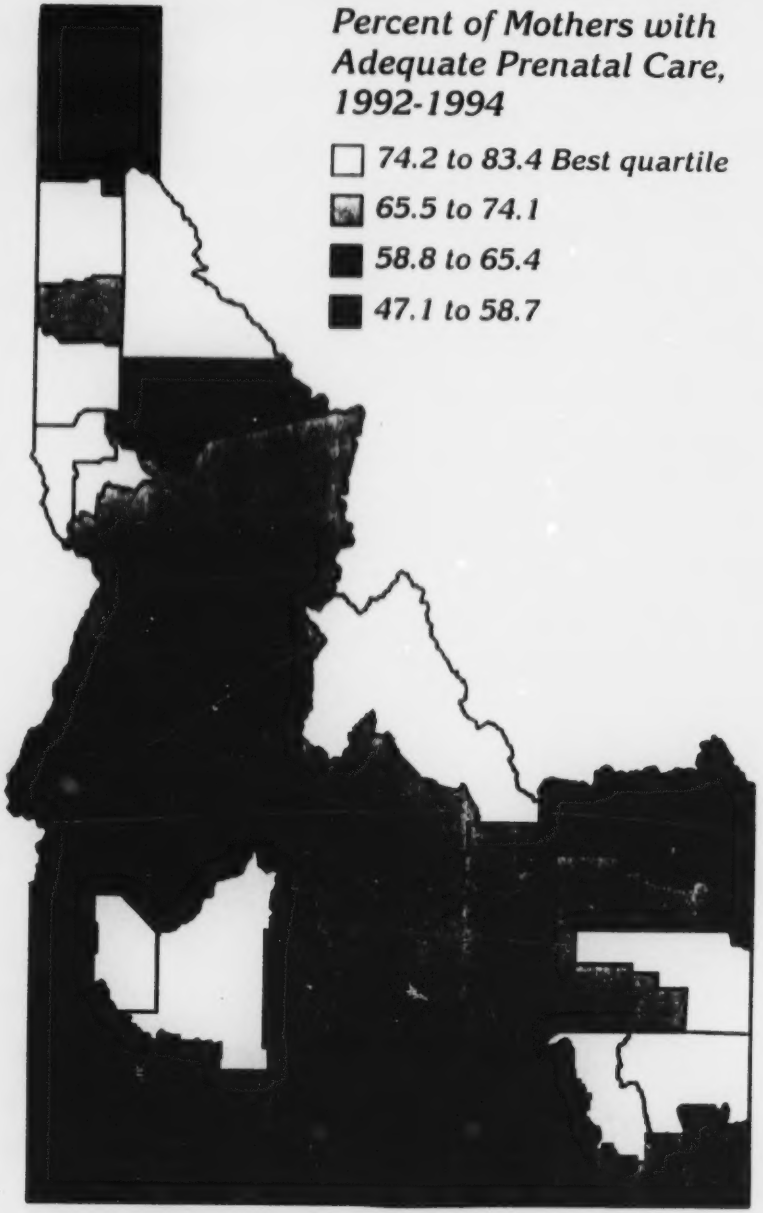
Idaho's child death rate is higher than the national rate of 28.8 in 1992. Nationally, child death rates have been declining; Idaho's trend fluctuates somewhat from year to year but does not appear to be declining like the national rate. The leading cause of childhood deaths in Idaho is accidents; 55% of 1994 child deaths were due to accidents.

The "Annualized Child Death Rate" refers to the average yearly number of deaths from all causes during an aggregate of 1992 through 1994 per 100,000 children, ages 1 to 14 years. Data are reported by place of residence, not place of death.

The child death rate illuminates the risks to children, including health problems, exposure to hazardous conditions, preventable injuries, accidents, child abuse and neglect.

43

MOTHERS WITH ADEQUATE PRENATAL CARE



In 1994, 11,945 Idaho mothers who gave birth were classified as receiving adequate prenatal care. That represents 71.9% of all mothers giving birth in that year.

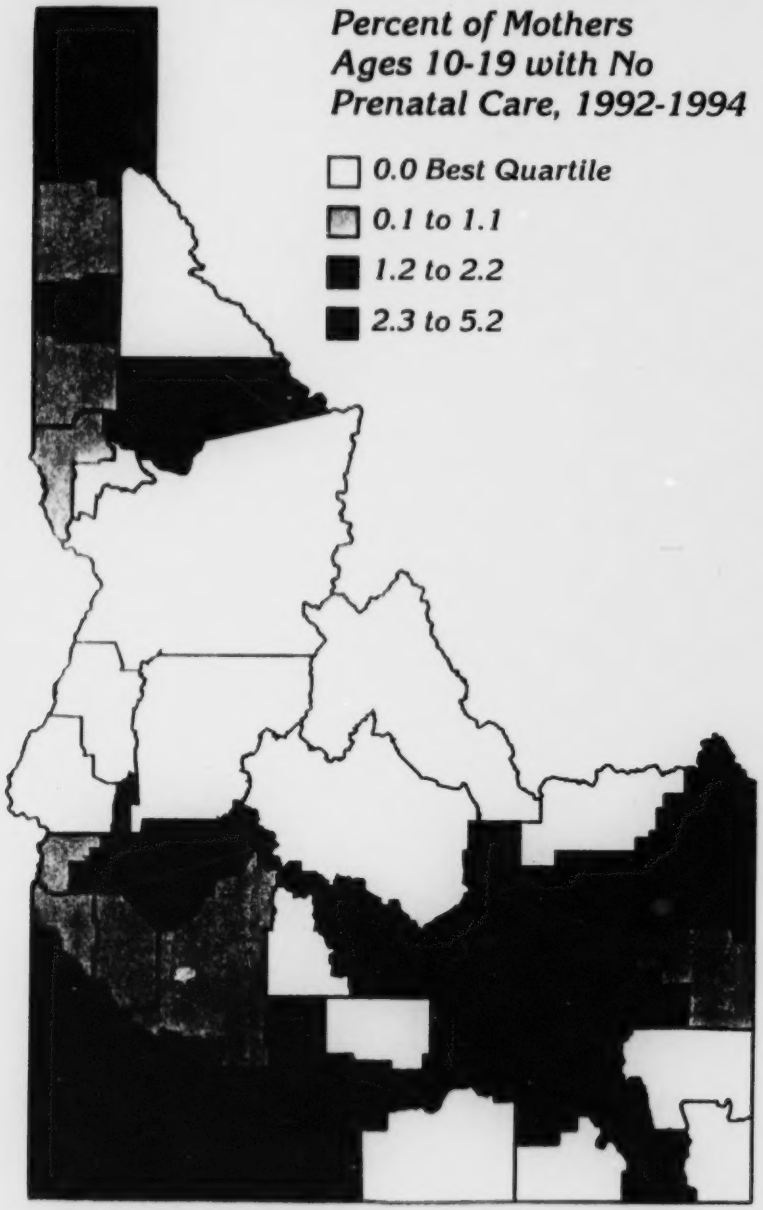
MOTHERS WITH ADEQUATE PRENATAL CARE

In Idaho, the percentage of women who receive adequate prenatal care has been steadily increasing.

The percent of "Mothers With Adequate Prenatal Care" is based on the Kessner Index of Prenatal Care which classifies prenatal care as adequate, intermediate or inadequate in accordance with recommendations for prenatal care set forth by the American College of Obstetricians and Gynecologists and the World Health Organization.

Women who receive adequate prenatal care increase their chances of delivering healthy, full-term, normal weight babies. Early and ongoing prenatal care can reduce the costs for neonatal intensive care to low birth weight babies.

IDAHO kids count



There were 35 births in 1994 to Idaho mothers, ages 10-19, who reported receiving no prenatal care; this comprised 1.5% of all births to Idaho teen mothers.

MOTHERS, AGES 10-19, WITH NO PRENATAL CARE

"Mothers, Ages 10-19, With No Prenatal Care" refers to mothers in this age group who reported they did not receive any prenatal care during their pregnancy.

A lack of prenatal care is correlated with other health risk behaviors (smoking, poor diet, drug abuse, alcohol abuse). Children born to teenage mothers are more likely to be of low birth weight, to have health problems and to be at risk for child abuse and neglect.

THE VISION

All children deserve community environments wherein families provide safe and nurturing homes for children to grow to their full potential.

"Dear Lord, be good to me. The sea is so wide and my boat is so small."

– Children's Defense Fund –

CHILD ABUSE REFERRALS

In Idaho's State Fiscal Year 1995, there were 13,452 child abuse referrals, involving 9,551 families. Of those, 42.9% were Neglect; 30.7% were Physical Abuse, 18.8% were Sexual Abuse, and 7.6% were Other.

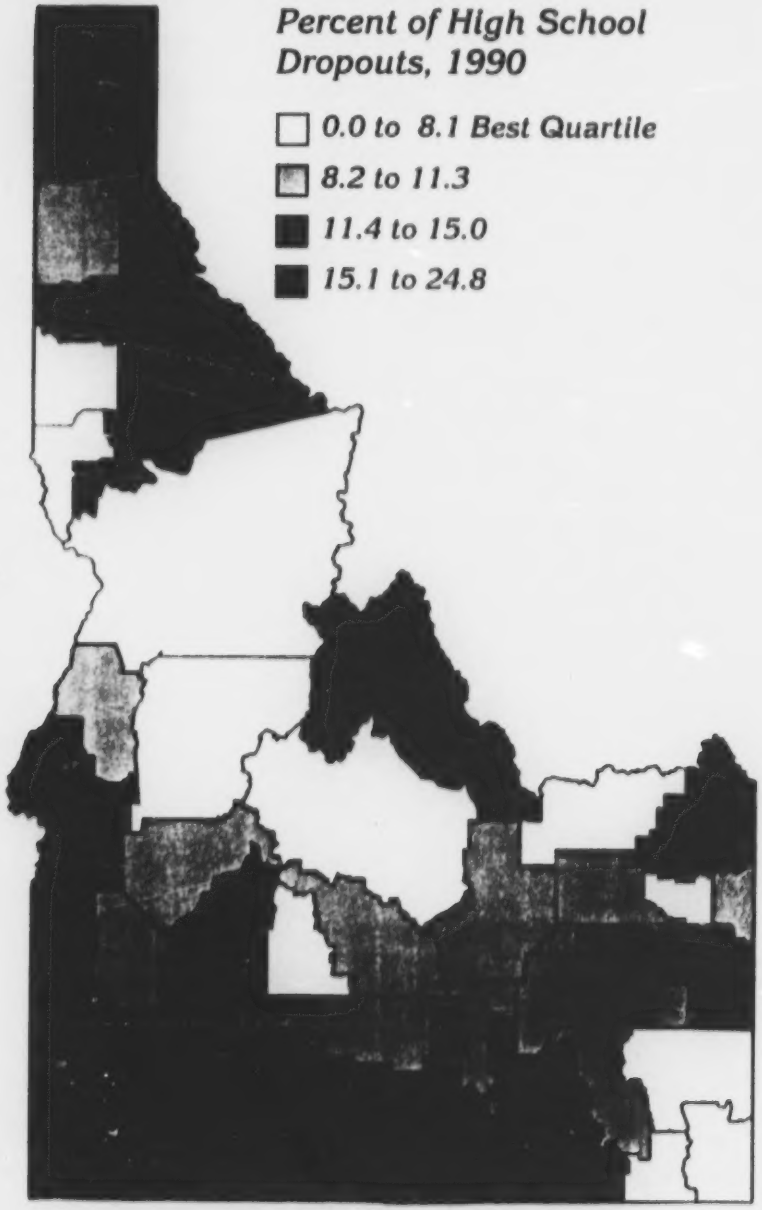
The "Total Number of Child Abuse Referrals" is the total number of child abuse referrals filed with the Idaho Department of Health and Welfare (IDHW) from July 1, 1994 to June 30, 1995. The overall profile of referral disposition during FY 1995 was: Valid, 17.8%; Indicated, 10.0%; Unable to Determine, 32.7%; Invalid 24.4% and Other, 15.0%.

Child abuse is often the result of many factors. Economic stresses, a lack of support systems, isolation, domestic violence and substance abuse are all contributing factors in child maltreatment.

Child Abuse Referrals by County are reported in Appendix 2 on page 128

THE VISION

All children deserve an education that prepares them to meet the future and enables them to achieve their potential.



54

According to the 1990 census, 6,627 (10.4%) of Idaho's 16 to 19 year olds dropped out of high school.

HIGH SCHOOL DROPOUTS

Idaho's high school dropout rate is 23% above the national rate. While the national rate has shown a steady decline since 1985; Idaho's rate has increased by 9% since 1985. Idaho has the second highest dropout rate when compared to neighboring states, exceeded only by Nevada. (1995 KIDS COUNT DATA BOOK: State Profiles in Child Well-Being, Annie E. Casey Foundation)

The High School Dropouts indicator is the percentage of teens, ages 16 to 19, who are not enrolled in school (full or part time) and who are not high school graduates.

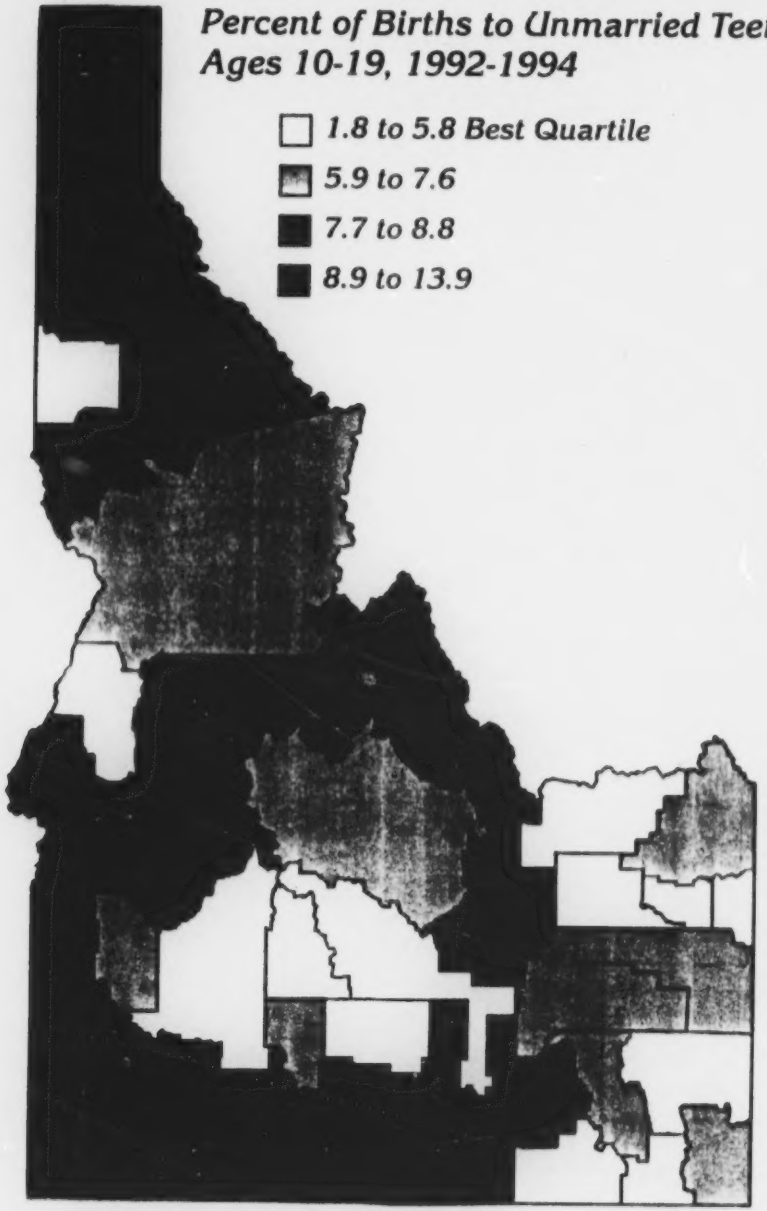
Today, teens who drop out of high school face enormous odds for achieving financial success in life. The world has changed, job opportunities have diminished, military options have narrowed and young people can no longer easily build a life without education. Some research suggests that many children who will eventually be high school dropouts can be identified as early as third grade. In any given year, the likelihood of slipping into poverty is about three times higher for high school dropouts.

High School Graduation Rates by School District are reported in Appendix 3 (see page 130) Standardized Test Scores by Grade and School District are reported in Appendix 4 (see page 132)

55

THE VISION

All children deserve the opportunity to grow up in communities that support them in making healthy choices.



In 1994, there were 1,311 births to unmarried Idaho teens. This represents 7.5% of total live births.

BIRTHS TO UNMARRIED TEENS

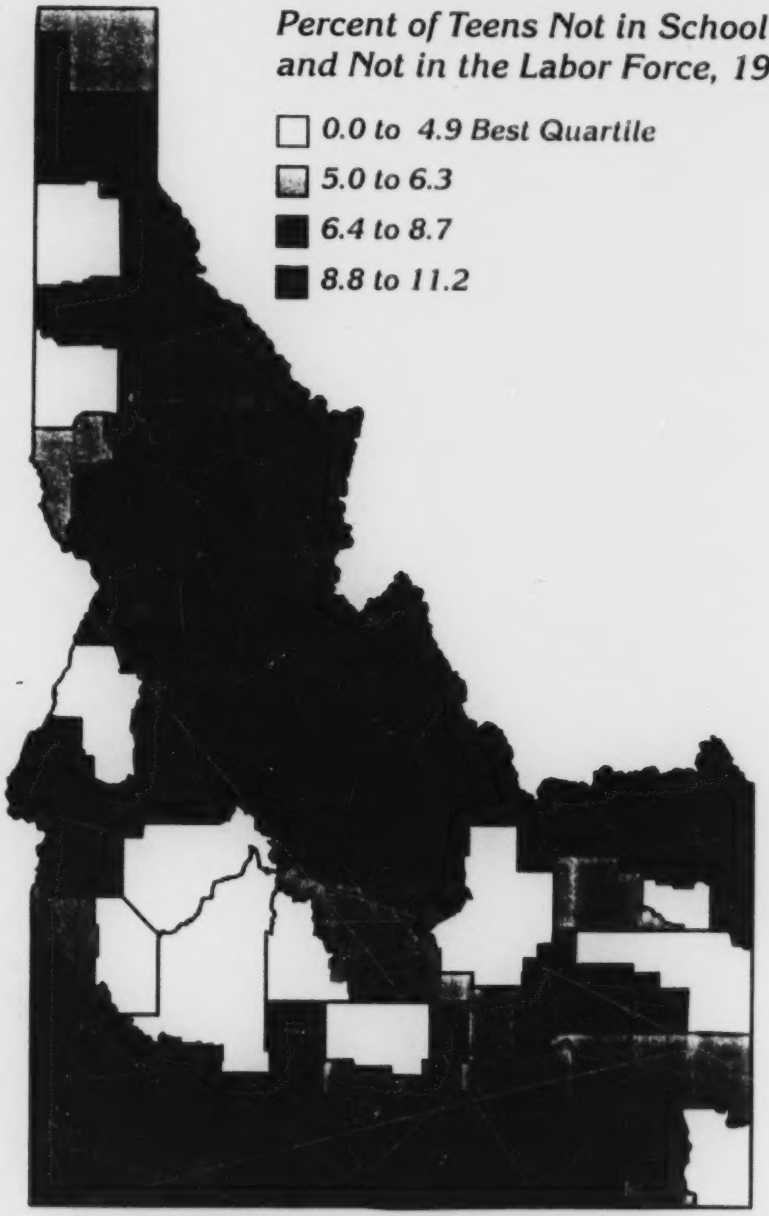
Idaho's unmarried teen birth rate (27.7 per 1,000 females in 1992) falls 35% below the 1992 national rate of 42.5 per 1,000 females. Among neighboring states, Idaho has one of the lowest rates of births to unmarried teens; only Utah ranks lower. (1995 KIDS COUNT DATA BOOK: State Profiles in Child Well-Being, Annie E. Casey Foundation) *But, in Idaho since 1991, the number and percent of births to unmarried teens have gradually increased. In 1991, there were 1,127 births (6.7%); in 1992, there were 1,223 births (7.1%); and in 1993, there were 1,264 births (7.3%).*

"Births to Unmarried Teens, Ages 10 to 19," is the percentage of total live births which occur to unmarried women under age 20. Data are reported by mother's place of residence. "Unmarried" refers to teens not married at conception, birth or any time between.

Children born to adolescents are more likely to be of low birth weight, to have health problems and to suffer child abuse and neglect. Adolescent parents have fewer educational and career opportunities, thus perpetuating poverty for themselves and their children.

TEENS NOT IN SCHOOL AND NOT IN THE LABOR FORCE

IDAHO kids count



60

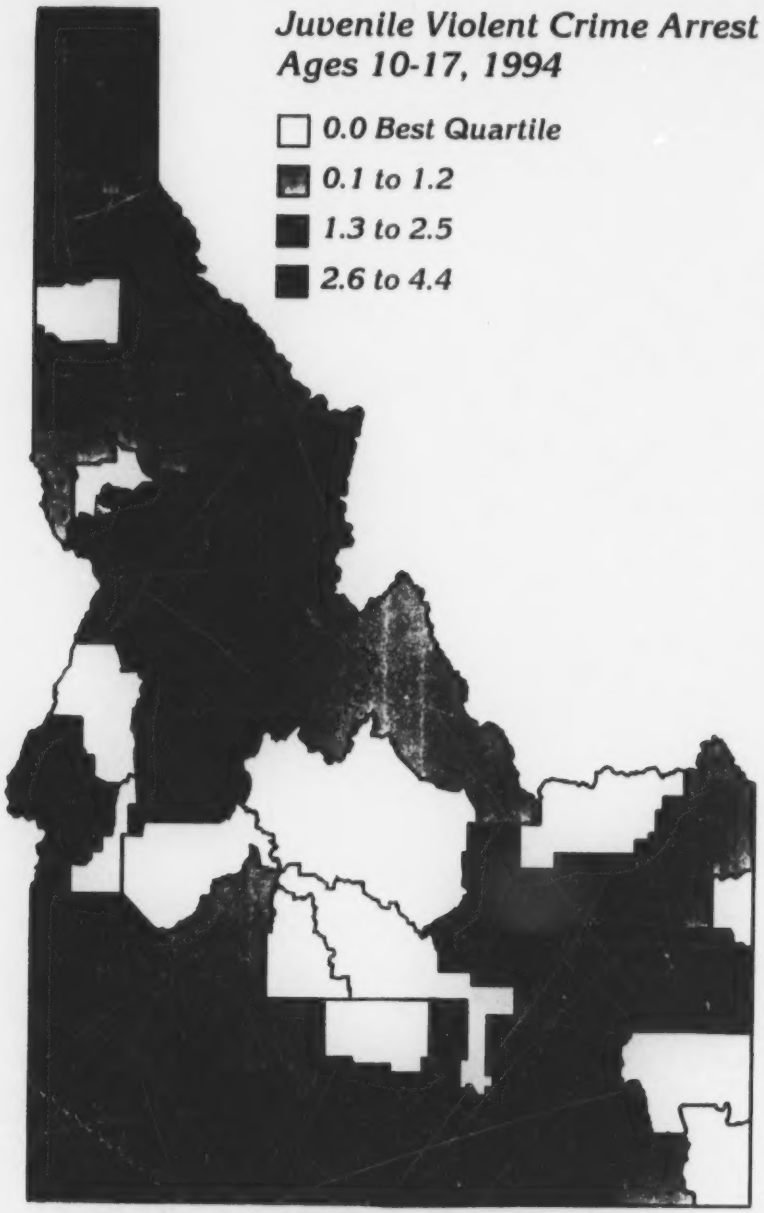
In 1990, there were 3,366 (5.3%) Idaho teens ages 16 to 19 who were not enrolled in school, not in the labor force and not in the military.

TEENS NOT IN SCHOOL AND NOT IN THE LABOR FORCE

Idaho has been experiencing an improving trend since 1986 in the percentage of teens not in school and not in the labor force

Teens not attending school and not working reflects a group of young people who are not engaged in any of the core activities that usually occupy people during this crucial period. These children face a higher risk of juvenile delinquency, substance abuse, juvenile crime and poverty.

61



62

In 1994, there were 406 arrests of juveniles, ages 10-17, for violent crimes. The Idaho juvenile violent crime arrest rate was 2.5 per 1,000 youths.

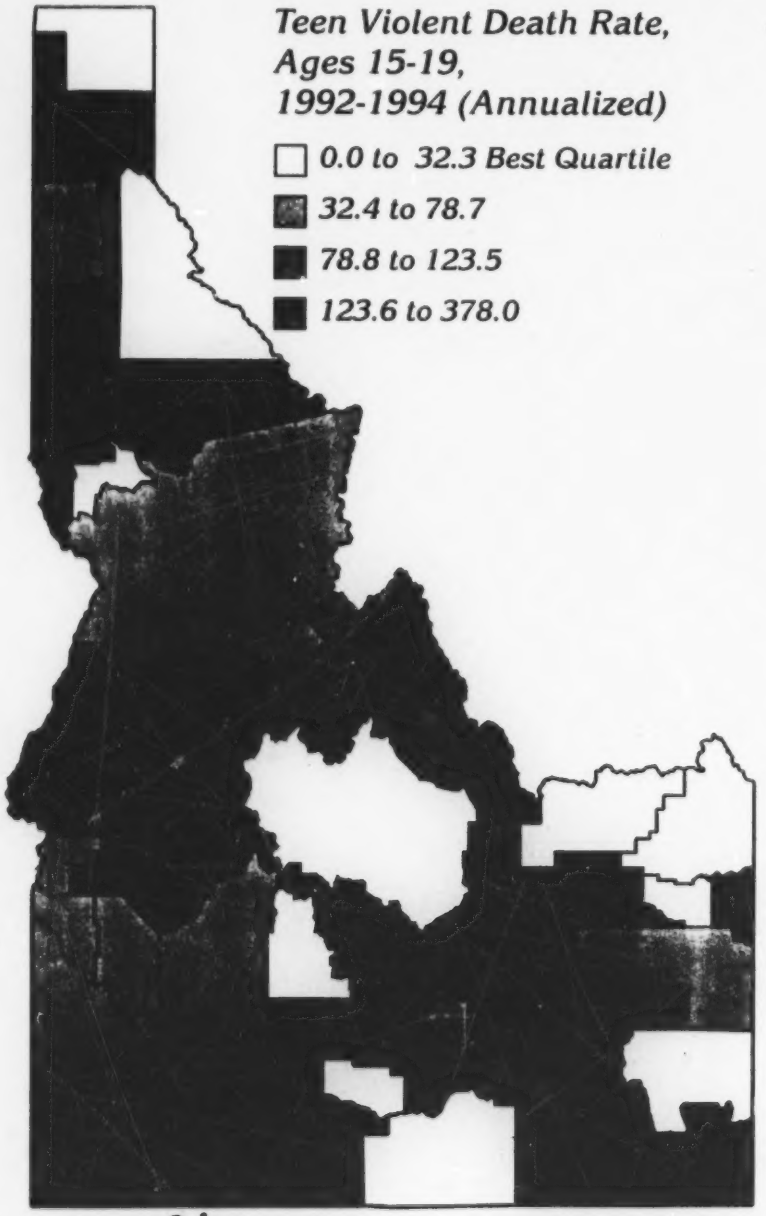
JUVENILE VIOLENT CRIME ARREST RATE

Idaho has been consistently lower than the national rate for juvenile violent crime arrests and the Idaho rate has been declining since 1991.

"Juvenile Violent Crime Arrest Rate, Ages 10 to 17," refers to the number of arrests of youths in this age group for violent crime (homicide, forcible rape, robbery, or aggravated assault). This includes repeat arrests of these same youths within the given year.

63

TEEN VIOLENT DEATH RATE



64

In Idaho, the 1992-1994 average annual teen violent death rate was 73.5 deaths per 100,000 teens. This represents 205 teens who died in the three year period.

TEEN VIOLENT DEATH RATE

The teen violent death rate nationally has remained steady since 1986. Idaho has had a definite decline in this indicator since 1986.

The "Annualized Teen Violent Death Rate, Ages 15-19," is the average yearly number of deaths from homicide, suicide, and accidents to teens ages 15 to 19 per 100,000 teens in this age group, during 1992 through 1994. The data are reported by place of residence, not by the place where death occurred.

65

"We must put our resources to work to produce healthy, safe and educated children. We must either speak decisively to society's shortcomings for our children or continue to reap the bitter harvest of illiteracy, poverty, and crime when today's neglected child becomes tomorrow's disillusioned adult."

– Cecil D. Andrus,
Governor (1972-1977, 1986-1994)

Infant Mortality (1992-94 rate, per 1,000 births)	7	7.6		8.1		1	1	1
Low Birth Weight Babies * (1992-94 %)	5	5.4		5.7		11	4	6
Mothers with Adequate Prenatal Care ** (1992-94 %)	15	71.0		60.2		58	81	76
Mothers Ages 10-19 with No Prenatal Care *** (1992-94 %)		1.4	100	0.0		0	0	0
Child Deaths Ages 1-14 (1992-94 annualized rate per 100,000 children)	202	33.6		101.5		6 ('92-'94 combined)		
High School Dropouts (1990 U.S. Census)	53	10.4		15.9	74			
Births to Unmarried Teens Ages 10-19 * (1992-94 %)	22	7.3		8.9		7	14	12
Juvenile Violent Crime Arrests, Ages 10-17 (1994 rate/1,000 youth)	22	2.5		3.1			3	4
Teens Not in School/Labor Force, Ages 16-19 (1990 U.S. Census)	111	5.3		11.2	52			
Teen Violent Deaths Ages 15-19 (1992-94 annualized rate per 100,000 teens)	37	73.5		101.0		2 ('92-'94 combined)		

WASHINGTON COUNTY

IDAHO kids count

* Percent of total live births for each county.

** Percent of live births with sufficient data to determine prenatal care; numerator is the number of single births and firstborn infants of multiple births with adequate prenatal care based on Kessner Index.

*** Percent of live births to mothers aged 10-19 for each county.

Caution should be exercised when attempting to draw conclusions from percents and rates depicted in this publication that are based on small numbers.

APPENDIX 2 — CHILD ABUSE REFERRALS BY COUNTY

Total number of Child Abuse Referrals *is the total number of child abuse referrals filed with the Idaho Department of Health and Welfare (IDHW) from July 1, 1994 to June 30, 1995 (FY 1995).*

Out of State *lists the number of referrals where the subject's home address is out of state. This accounts for 167 of the child abuse referrals during FY 1995.*

Total Number of Families Subject of Child Abuse Referrals *is the total number of families that were referred to IDHW for child abuse or neglect assessment during FY 1995.*

Child Abuse by Number of Referrals and Type of Abuse Referral *is the number of referrals categorized by type of abuse (sexual abuse, physical abuse, neglect, or other) as reported to IDHW during FY 1995.*

The overall profile for reported types of abuse during FY 1995 is: *Neglect, 42.9%; Physical, 30.7%; Sexual, 18.8%, and Other, 7.6%.*

Child Abuse by Disposition of Reports is the number of child abuse reports by disposition type: *Valid, Indicated, Unable to Determine, Invalid, or Other, as determined by IDHW during FY 1995.*

Valid *includes referrals where there is a confession or court finding of abuse and/or neglect.*

Indicated *refers to having reasonable cause to believe abuse has occurred.*

Unable to Determine *includes referrals where after an assessment there is not enough information to determine if abuse or neglect has occurred, or IDHW is unable to locate the family.*

Invalid *includes referrals where assessment shows there is no occurrence of abuse or neglect.*

Other *refers to dispositions that did not fit into the defined categories. In some locations, the "other" category may reflect cases that were not dispositioned due to a high volume of referrals and the need to prioritize resources to high risk cases.*

The overall profile of referral disposition during FY 1995 is: Valid, 17.8%; Indicated, 10.0%; Unable to Determine, 32.7%; Invalid, 24.4%. and Other, 15.0%.

Please note that differences between 1994 and 1995 data may be a result of changes in the Department's automated information system and data entry.

APPENDIX 3 — HIGH SCHOOL GRADUATION RATES BY SCHOOL DISTRICT

High School Graduates by School District *is the percentage of students enrolled in 12th grade in the fall of 1994 who graduated from high school by August 1995.*

The high school graduation rate does not adjust for migration or dropouts prior to entering 12th grade, nor does it account for completion of high school equivalency, such as a GED.

In 1995, 14,198 (90%) 12th grade students graduated from high school in Idaho.

Graduating from high school is associated with long term positive outcomes for young adults. Those who graduate are more likely to be regularly employed than non-graduates.

County *	District #	District Name	94-95 Graduates	% HS Grads

* In some cases, school districts provide educational service in multiple counties

Data Source: Idaho Dept. of Education

APPENDIX 4 — STANDARDIZED TEST SCORES BY GRADE AND SCHOOL DISTRICT

Standardized Test Scores by Grade Level and School District *provide information about the performance of Idaho students compared to students in a national sample. The scores include both Pupil Norms (PN) and School Norms (SN). The table lists the 1994-1995 School Year Standardized Test Scores for 4th and 8th Grade Iowa Tests of Basic Skills (ITBS) and the 11th Grade Tests of Achievement and Proficiency (TAP).*

Pupil Norms *reflect the performance of hundreds of thousands of students who were part of the national standardization. Pupil Norms allow for comparisons of individual student scores to the scores of other students in the same grade nationally. Idaho 4th grade students performed as well or better than 49% of other 4th grade students nationally.*

For the 1994-1995 school year in Idaho, the average 4th grade Pupil Norm was 49, the 8th grade Pupil Norm was 57, and the 11th grade average Pupil Norm score was 58.

School Norms *reflect the average performance of students by school building that were part of the national standardization. School Norms are used when looking at how a particular school compares to other schools in the norming group. Idaho 11th grade schools performed as well or better than 62% of other 11th grade schools nationally.*

For the 1994-1995 school year in Idaho, the 4th grade School Norm was 47, the 8th grade School Norm was 63, and the 11th grade School Norm was 62.

PN=Pupil Norm; SN=School Norm NR = Not reported, no test given during the test period, or no students in that grade level. NHS = No high school

APPENDIX 5 — DATA SOURCES AND NOTES

NUMBERS, PERCENTAGES, AND RATES

Each statistic tells us something different about children. The numbers represent real individuals. The percents and rates also represent individuals but have the advantage of allowing for comparisons between counties.

In this publication, indicators are expressed as either raw numbers (25), percentages (25%), or rates (25 per 1,000 or 25 per 100,000). The formula for percents or rates is the number of events, divided by the population at risk of the event (county, state), and multiplied by 100 for percents or 1,000 or 100,000 for rates.

Caution should be exercised when attempting to draw conclusions from percents and rates that are based on small numbers. Communities with small populations can show very large or very small percentages as a result of only a few events.

INDICATORS

MATERIAL/ECONOMIC WELL-BEING

***Children in Poverty** is the percentage of related children under age 18 who live in families with incomes below the U.S. Poverty Threshold as defined by the U.S. Office of Management and Budget. "Related children" include the family head's children by birth, marriage, or adoption as well as other persons under age 18 who are related to the family head. The poverty threshold in 1989 for a family of four was $12,674. The 1990 Census data for poverty are based on the 1989 personal income and 1989 poverty threshold. **Data Source:** U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

***Children in Single Parent Families** is the percentage of related children under age 18 who live in families headed by a person — male or female — without a spouse present in the home. "Related children" include the family head's children by birth, marriage, or adoption, as well as other persons under age 18 who are related to the family head. **Data Source:** U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

HEALTH

***Infant Mortality Rate (per 1,000 live births)** is the number of deaths occurring to infants under one year of age per 1,000 live births. The data are reported by place of residence, not by place of death. The formula for the infant mortality rate is the number of infant deaths, divided by the number of live births, multiplied by 1,000. **Data Source:** 1992 Idaho Annual Summary of Vital Statistics; 1993 Idaho Annual Summary of Vital Statistics; and special data runs for 1994 data. Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

***Low Birth Weight Babies** is the percentage of live births weighing under 2,500 grams (5.5 pounds and under). The data are reported by place of mother's residence, not by place of birth. The formula for percent of low birth weight babies is the number of babies weighing less than 2,500 grams, divided by the total live births, and multiplied by 100. **Data Source:** 1992 Idaho Annual Summary of Vital Statistics; 1993 Idaho Annual Summary of Vital Statistics; and special data runs for 1994 data. Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

***Mothers with Adequate Prenatal Care** is based on the Kessner Index of Prenatal Care which classifies prenatal care as Adequate, Intermediate, or Inadequate in accordance with recommendations for prenatal care set forth by the American College of Obstetricians and Gynecologists and the World Health Organization. The Kessner Index considers the onset of prenatal care and varies the number of required prenatal visits with length of gestation. The only difference between Idaho data and the standard Kessner Index is the exclusion of Idaho records with missing information rather than assignment to the Inadequate category. Records with missing information are subtracted from Resident Live Births (which includes only single births and firstborn infants of multiple births) resulting in Remaining Live Births. The percentage is derived by dividing births with Adequate Prenatal Care by Remaining Live Births and multiplying by 100. **Data Source:** 1992 Idaho Annual Summary of*

Vital Statistics; 1993 Idaho Annual Summary of Vital Statistics; and special data runs for 1994 data. Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).

Mothers Without Prenatal Care Ages 10-19 *is the percentage of births to mothers ages 10-19 who reported that they did not receive prenatal care during their pregnancy. Mothers are asked what month of pregnancy prenatal care began and the total number of prenatal visits. The numbers of births to mothers without prenatal care is divided by total live births to mothers ages 10-19, and multiplied by 100.* ***Data Source:*** *Special data runs for 1992, 1993, and 1994 data. Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

Child Death Rate Ages 1-14 (per 100,000 children) *is the number of deaths from all causes to children between ages 1 to 14 per 100,000 children in this age range. The data are reported by place of residence, not by place of death. The formula for this rate is the number of deaths to children ages 1 through 14 in a 3 year period divided by 3, divided by the estimated population at the midpoint of the three-year period of children ages 1 through 14 and multiplied by 100,000.* ***Data Source:*** *Special data runs: 1992-1994 data and 1993 population estimates for ages 1 through 14. (See note: Population Estimate Methodologies) Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

EMOTIONAL WELL-BEING AND PHYSICAL SAFETY

Total Number of Child Abuse Referrals *is the total number of child abuse referrals filed with the Idaho Department of Health and Welfare (IDHW) from July 1, 1994 to June 30, 1995 (FY 1995). Out of state is a category of information where the subject of referral resides out of state. During FY 1995, 167 referrals were out of state.* ***Data Source:*** *Special data run for 1995. Fiscal year data. Idaho Department of Health and Welfare, Division of Family and Community Services, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5700).*

Total Number of Families Subject of Child Abuse Referrals *is the total number of families that were referred to IDHW for child abuse or neglect assessment during FY 1995. Family total is an unduplicated count by county, but includes 162 families that were reported in more than one county. Out of State is a category of information where the subject of the referral resides out of state.* ***Data Source:*** *Special data run for 1995. Fiscal year data. Idaho Department of Health and Welfare, Division of Family and Community Services, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5700).*

Child Abuse by Number of Referrals and Type of Abuse Referrals *is the number of referrals categorized by type of abuse (physical abuse, sexual abuse, neglect, or other) as reported to IDHW during FY 1995. The "Other" category includes anything not stated, status offenses, calls for information only, home studies, interstate compacts, property offenses, disruptive behavior, suicide, offenses against parents, court related, service needs assessments, self support, affective disorders, medical/social evaluations or anything that did not fall into the other three categories. Out of State is a category of information where the subject of the referral resides out of state.* ***Data Source:*** *Special data run for 1995. Fiscal year data. Idaho Department of Health and Welfare, Division of Family and Community Services, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5700).*

Child Abuse by Disposition of Referrals *is the number of child abuse referrals by disposition type: Valid, Indicated, Unable to Determine, Invalid, or Other, as determined by IDHW during FY 1995.* ***Valid*** *refers to child abuse and neglect referrals when the allegations are confirmed, worker witnessed, court determined or evaluated, involve a confession or are substantiated through the presence of significant evidence which establishes a factual foundation for the determination.* ***Indicated*** *refers to child abuse and neglect referrals when allegations are neither confirmable nor refutable; however, the worker has reasonable cause to believe the abuse or neglect has occurred.* ***Unable to Determine*** *refers to a situation where a determination of child abuse or neglect cannot be made and the worker has no firm belief that abuse has occurred.*

This includes referrals relating to families the worker is unable to locate. ***Invalid*** *refers to child abuse and neglect referrals that are clearly unfounded, erroneous, or otherwise incorrect, and the worker feels comfortable that the abuse or neglect did not occur.* ***Other*** *includes any disposition not stated, cases not dispositioned, diverted/referred, accepted, informal, evaluation only, client rejected services, security commitment, community commitment, county probation, voluntary termination, or anything that did not fall into the other four categories.* ***Out of State*** *is a category of information where the subject of the referral resides out of state.* ***Data Source:*** *Special data run for 1995. Fiscal year data. Idaho Department of Health and Welfare, Division of Family and Community Services, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5700).*

COGNITIVE DEVELOPMENT/ACADEMIC ACHIEVEMENT

High School Graduates by School District *is the number of students who graduated from high school by August, 1995, divided by those enrolled in 12th grade as of October 1, 1994 (12th Grade Net Enrollment), then multiplied by 100. This formula does not adjust for migration or dropouts.* ***Data Source:*** *Public and Non-Public School Membership: Public School 12th Grade Net Enrollment; and 1994-1995 School Year High School Graduate Report. School year data. Idaho Department of Education, P.O. Box 83720, Boise, Idaho 83720-0027 (208-334-3330).*

Standardized Test Scores by Grade Level, School District *includes both Pupil Norms and School Norms. Pupil Norms reflect the performance of hundreds of thousands of students who are part of the national standardization. The Pupil Norms evidence frequency distributions that are very broad and diverse. Pupil Norms allow for comparisons of individual student scores to the scores of other students in the same grade nationally. School Norms reflect a naturally smaller number of school buildings that participate in the national standardization. School Norms allow for the comparison of performance between school buildings. Because the pupil norm is based on a larger sample size than the school norm, it may provide a more stable figure for longitudinal comparisons over several years.* ***Data Source:*** *1994-1995 School Year Standardized Test Scores for 4th Grade Iowa Tests of Basic Skills (ITBS), Pupil Norms and School Norms; 8th Grade Iowa Tests of Basic Skills (ITBS), Pupil Norms and School Norms; 11th Grade Tests of Achievement and Proficiency (TAP), Pupil Norms and School Norms. School year data. Idaho Department of Education, P.O. Box 83720, Boise, Idaho 83720-0027 (208-334-3330).*

High School Dropouts *is the percentage of teens ages 16 to 19 who are not enrolled in school (full or part-time) and are not high school graduates.* ***Data Source:*** *U.S. Bureau of Census, 1990 Census of Population and Housing, Summary Tape File 3.*

ADOLESCENT BEHAVIOR

Births to Unmarried Teens Ages 10-19 *is the percentage of total live births which occur to unmarried women under age 20. Data are reported by the mother's place of residence.* ***Data Source:*** *1992 Idaho Annual Summary of Vital Statistics; 1993 Idaho Annual Summary of Vital Statistics; and special data runs for 1994 data. Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

Juvenile Violent Crime Arrest Rate Ages 10-17 (per 1,000 youths) *is the number of arrests of persons under age 18 for violent offenses (homicide, forcible rape, robbery, or aggravated assault), per 1,000 youths between the ages of 10 to 17. Rates are not shown in the table for those counties with youth populations under 150 that have incidences of juvenile violent crime arrests. Caution must be exercised when drawing conclusions from rates for counties with small populations.* ***Data Sources:*** *1993 and 1994 data. Idaho Department of Law Enforcement, Support Services, P.O. Box 700, Meridian, Idaho 83680 (208-884-7040). July 1, 1994 population estimates for ages 10 to 17: See note; Population Estimate Methodologies.*

Teens Not in School and Not in the Labor Force Ages 16-19 *is the percentage of teens ages 16 to 19 who are not enrolled in school (full or part-time), not in the labor force and not in the Armed Forces.* ***Data Source:*** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Teen Violent Death Rate Ages 15-19 (per 100,000 teens) *is the number of deaths from homicide, suicide, and accidents to teens between ages 15 and 19, per 100,000 teens in this age group. The data are reported by place of residence, not by place where the death occurred. The formula for this rate is the number of deaths in a 3-year period divided by 3, divided by the estimated population at the midpoint of the 3-year period and multiplied by 100,000.* ***Data Source:*** *Special data runs: 1992-1994; 1993 population estimates for ages 15 to 19. (See note: Population Estimate Methodologies) Calendar year data. Idaho Department of Health and Welfare, Center for Vital Statistics and Health Policy, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5979).*

BACKGROUND INFORMATION

POPULATION

Total Population *is the 1992 estimated resident population in a specific geographic area.* ***Data source:*** *U.S. Bureau of the Census, Population Estimates Division, 2/8/94 Report.*

Population by Race and Ethnicity *is the 1992 estimated resident population in a specific geographic area, broken into categories of race and ethnicity. The categories for race includes White, Black, Asian or Pacific Islander, and American Indian, including Eskimo and Aleutian. Hispanics are included under ethnicity and appropriate race.* ***Data Source:*** *U.S. Bureau of the Census, Population Estimates Division, 2/8/94 Report.*

Under 18 Population *is the total estimated 1992 resident population of persons from birth through 17 years. (See note: Population Estimate Methodologies)* ***Data Source:*** *U.S. Bureau of the Census, Population Estimates Division 2/8/94 Report.*

Under 18 Population by Race and Ethnicity *is the total estimated 1992 resident population of persons from birth through age 17 in a specific geographic area. The population is broken into categories of race and ethnicity. The categories for race include: White, Black, Asian or Pacific Islander, and American Indian, including Eskimo and Aleutian. Hispanics are included under ethnicity and appropriate race. (See note: Population Estimate Methodologies)* ***Data Source:*** *U.S. Bureau of the Census, Population Estimates Division, 2/8/94 Report.*

WORK AND FAMILY

Children Under 18 with Both or Only Parent in Labor Force. *Children under age 18 are included in this category if they live with only one parent and that parent is in the labor force (i.e., working or looking for work) or if they live with two parents and both are in the labor force. Parenthood is determined by birth, marriage, or adoption.* ***Data Source:*** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Children Under Six with Both or Only Parent in Labor Force. *Children under age six are included in this category if they live with only one parent and that parent is in the labor force (i.e., working or looking for work), or if they live with two parents and both are in the labor force. Parenthood is determined by birth, marriage, or adoption.* ***Data Source:*** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Women in Labor Force with Youngest Child Under Age Six *is the number of women ages 16 and over (regardless of marital status) whose youngest child is under age six, and who are in the paid labor force.* ***Data Source:*** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Women in Labor Force with Youngest Child Ages 6 to 17 *is the number of women ages 16 and over (regardless of marital status) whose youngest child is between ages 6 and 17 and who are in the paid labor force.* ***Data Source:*** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

APPENDIX 5 — DATA SOURCES AND NOTES (continued)

FAMILY PROFILES

Average Income of Families with Children by Family Type *is the average (mean) annual income for families with related children under age 18 living in the household. "Related children" include the family head's children by birth, marriage, or adoption as well as other persons under age 18 who are related to the family head and living in the household. The average or mean income is represented for married-couple families, female-headed families with no husband present, and male-headed families with no wife present.* **Data Source:** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Families with Children Under 18 by Family Type *are families with related children under age 18 living in the household. "Related children" include the family head's children by birth, marriage, or adoption, as well as other persons under age 18 who are related to the family head and living in the household. Three categories are represented for families with children by family type. These categories are married-couple families, female-headed families with no husband present, and male-headed families with no wife present.* **Data Source:** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Children Under 18 Who Are Not Living with a Parent *are the number of children who do not live in the same household with at least one of their parents. Parenthood is determined by birth, marriage, or adoption. This figure also includes children living in group quarters. There are small numbers of children (those living in unrelated subfamilies) where it could not be determined from Summary Tape File 3 tables whether or not they were living with a parent. These children are counted as not living with a parent.* **Data Source:** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Children Ages 5 to 17 Who Don't Speak English at Home *are the number of children between ages 5 and 17 who speak a language other than English at home as recorded in the 1990 Decennial Census.* **Data Source:** *U.S. Bureau of the Census, 1990 Census of Population and Housing, Summary Tape File 3.*

Families Receiving AFDC-Basic *is the average number of families per month receiving cash assistance through the Aid to Families with Dependent Children (AFDC) Basic program. Recipients are families where one parent is incapacitated, or absent, and the family meets income and resource eligibility requirements. The average amount per family is the total benefit expenditures during 1994 divided by the monthly average number of recipient families during 1994, thus it is the average total payment per family during 1994.* **Data Source:** *1994 calendar year data. Idaho Department of Health and Welfare, Division of Welfare, Research and Statistics Section, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5685).*

Families Receiving AFDC-Unemployed Parent *is the average number of families per month receiving cash assistance through the Aid to Families with Dependent Children, Unemployed Parent (AFDC-UP) program. The program provides cash assistance to needy families with children who are deprived due to the unemployment or under employment of the family's principal wage earner. Recipient families are two-parent families. Participants must meet income and resource eligibility requirements. The average amount per family is the total benefit expenditures during 1994 divided by the monthly average number of recipient families during 1994, thus it is the average total payment per family during 1994.* **Data Source:** *1994 calendar year data. Idaho Department of Health and Welfare, Division of Welfare, Research and Statistics Section, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5685).*

Families Receiving Food Stamps *is the average number of families per month receiving assistance through the Food Stamp Program. The program provides food benefits necessary for good nutrition to low-income households. Participants must meet eligibility requirements. The average amount per family is the total benefit expenditures during 1994 divided by the monthly average number of recipient families during 1994, thus it is the average total payment per family during 1994.* **Data Source:** *1994 calendar year data. Idaho Department of Health and Welfare, Division of Welfare, Research and Statistics Section, P.O. Box 83720, Boise, Idaho 83720-0036 (208-334-5685).*

POPULATION ESTIMATE METHODOLOGIES

Development of 1993 and 1994 Population Estimates for Vital Statistics Rates

In the fall of 1995, the most detailed population estimates available for 1993 and 1994 were statewide single-year age/sex population estimates and total population estimates by county. In order to provide age/sex estimates by county for 1993 and 1994 to develop county-level age-specific rates, KIDS COUNT chose to develop population estimates for use in this publication.

The 1992 county five-year age/sex estimates from the U.S. Bureau of Census, Population Estimates Branch, were used as the base for developing both the 1993 and 1994 county age/sex estimates. The following steps outline the process used to develop the estimates (1993 will be used in this example).

For each statewide five-year age and sex estimate, a percent was calculated to measure the ratio of the 1993 U.S. Bureau of the Census estimate for Idaho to the 1992 U.S. Bureau of the Census estimate for Idaho. Each county estimate for the respective age and sex category was multiplied by this percent to obtain controlled population estimates.

Example for developing 1993 county population estimates for males aged 5-9:

(1993 statewide Census estimate for males aged 5-9)/
(1992 statewide Census estimate for males aged 5-9)*
(each county's 1992 estimates for males aged 5-9)

To correct for changes in county population estimates, another percent was then developed for each county.
Example for adjusting to 1993 county totals developed by the U.S. Bureau of the Census:

(1993 Census estimate for county)/
(1993 county controlled estimate: a sum of controlled population estimates)*
(each age/sex estimate for the respective county)

Although the last step of this process affected the statewide five-year age and sex estimates, it was agreed the total county population estimates should reflect Census estimates as the data were being developed for county rates.

Development of 1992 Population Estimates by Race/Ethnicity

In the fall of 1995, Idaho county population estimates by race and ethnicity were available only in the form of 1992 U.S. Bureau of the Census estimates. Those figures are noted in the "County population by race and ethnicity" figures listed for each county. The "Under 18 population by race and ethnicity" figures for each county were calculated by totaling the 1992 estimated figures from ages < 5 years to 10 to 14 years, inclusive, and adding three-fifths of the 15 to 19 years age category. **These figures should not be considered to be final population estimates, but instead a general description of the racial and ethnic mix of a county's population. Caution should be used when attempting to draw conclusions from percents and rates that are based on small numbers.**

Development of 1994 Population Estimates for the 10 to 17 Years Age Group

In the fall of 1995, county population estimates for the 10 to 17 years age group were available only in the form of 1990 U.S. Bureau of the Census figures. To develop 1994 juvenile violent crime rates by county, updated population estimates were desired. KIDS COUNT chose to use the 1994 county five-year age group estimates developed for this publication as a base and to modify them as needed to obtain county estimates for the age group 10-17. The following steps outline the process for calculating 1994 county estimates for the 10-17 year age group.

A percent was developed for each county reflecting the proportion of 15-17 population to the 15-19 population based on 1990 census figures. This percent was applied to the respective county's 1994 15-19 population estimate to obtain a derived county estimate for the age group 15-17. The county results for the 15-17 year age group were summed to obtain a derived 1994 statewide figure for 15- 17-year-olds. The official 1994 state estimate for the 15-17 year age category from the U.S. Bureau of the Census was compared to

the derived 1994 state estimate and a factor was developed reflecting the ratio. This statewide factor was applied to each county's derived population estimate for 15 -17-year-olds to develop a new 15-17 county population estimate. For each county, the new 15-17 county population estimate was added to the 10-14 population estimate. The resulting 10-17 population estimates were rounded for calculation of rates.

These figures should not be considered to be final population estimates for this age group, but instead used as a general description of the population base of 10 to 17-year-olds for each county in order to calculate juvenile violent crime arrest rates.

Caution should be used when attempting to draw conclusions from percents and rates that are based on small numbers. Local county law enforcement officials should be contacted for more specific information regarding juvenile violent crime rate information for their area of jurisdiction.

DATA MAPPING METHODOLOGIES

Idaho maps depicting KIDS COUNT data were based on division of Idaho's 44 counties into quartiles. Counties were assigned a rank of 1 through 44, with 1 being the lowest rate (or percent) and 44 being the highest, with the exception of the indicator "Adequacy of Prenatal Care," which was ranked from highest to lowest value. Counties with equal values were assigned dual ranking. Counties ranked 1 through 11 were assigned to the first quartile, 12 through 22 to the second quartile, 23 through 33 to the third quartile, and 34 through 44 to the fourth quartile. All county values were rounded to 1 decimal point prior to ranking.

CUT ON DOTTED LINE — FOLD AND STAPLE

Answers to the following questions will help us meet future information needs.
Thank You.
Circle the choice(s) that best answers the following questions.

1. Type of organization? Profit Non-profit

NOTES

The KIDS COUNT Information Clearinghouse is a resource for Idaho citizens, decision makers, and program planners to obtain accurate and comprehensive data about children and families. Project staff are available to provide information about effective strategies for improving the health and well-being of children, and can provide presentations of Idaho KIDS COUNT data. Copies of KIDS COUNT Data Books and presentation graphics are available through the Clearinghouse. For information, publications or electronic data products, call toll-free or write:
